Screen 3 — Home Page

Central hub showing the four Must-Have features: Live Bus Location, Daily Schedule, Nearest Stop, and Notifications.

Screen 4 — Loading State

Shown while live bus data is being fetched. A back button lets the user cancel instead of waiting indefinitely.

VU SHUTTLE

Live Map

Bus will arrive in 5 mins

Screen 5 — Live Map

Successful result: shows the live map placeholder and estimated time of arrival.

Screen 9 — Return to Home

Confirms the navigation loop closes correctly — every flow can return the user back to the home screen.

2. Heuristic Report

1. Violation: User Control & Freedom (Loading Screen)

In the original sketch, the loading screen had no way for the user to exit if the data took too long to load or failed silently.

Fix: A back button was added to the loading screen, giving the user a clear way to cancel and return without waiting.

Before

After

2. Violation: Help Users Recognize, Diagnose, and Recover from Errors (No Data Found)

The initial "No Data Found" screen (shown when no buses are currently running) was a dead end it gave no explanation and no next step, leaving the user stuck.

Fix: The screen was updated with clear guidance: "No Data Found There are no buses running currently, check the schedule," directing the user toward a working alternative instead of a blank stop.

Before

After

3. Violation: Error Prevention (Login Error)

Initially, an incorrect login attempt marked both the mobile number and password fields as incorrect and forced the user to re-enter all information even though only the password was wrong.

Fix: The login error screen now keeps the mobile number field populated and only prompts the user to re-enter the password, reducing unnecessary re-entry and minimizing user memory load.
